

ALPENKONVENTION
CONVENTION ALPINE
ALPSKA KONVENCIJA
CONVENZIONE DELLE ALPI

Dan Alpske konvencije

Mojstrana, 4. 12. 2020

Živa Novljan, Stalni sekretariat Alpske konvencije

Alpska konvencija

Osnovni podatki

190 700
km²

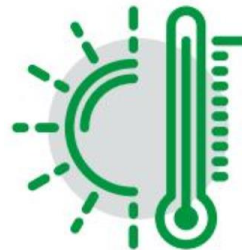

več kot
5700
občin

več kot 14
milijonov
prebivalcev

13 000 rastlinskih
in 30 000 živalskih
vrst

zvišanje povprečne
temperature zraka
za skoraj 2 °C

Tematska področja

Varstvo tal

- **Protokola in delovni skupini:** Varstvo tal, Urejanje prostora in trajnostni razvoj
- **Odbor za preverjanje:** Poglobljeno preverjanje na temo varčna raba tal
- Aktivnosti v sklopu **AS6 EUSALP**
- **YPAC:** Maribor

Alpski sistem podnebnih ciljev 2050

- Potrjen na XV. Alpski konferenci 2019
- 2 cilja za sektor „Tla“
- Akcijski načrt za podnebje v Alpah 2.0: **smernice izvajanja**

SOIL

PRESERVE. ENHANCE. MINIMISE. SEQUESTRATION. CARBON. QUALITY. GUIDELINES. LAND-TAKE. LAND-SEALING.

Use land in a way appropriate for the soil functions and protect highly functional soils – this is a key factor for enhancing soil quality. The ACB developed steps to enhance Alpine soil quality by emphasizing the importance of an Alpine-wide framework for preservation of carbon-rich soils (soil quality) as well as reducing land-take and land-sealing (soil quantity) within its future climate action.

Pathway 1	Pathway 2	Pathway 3
<p>Preservation and sequestration of carbon in soil</p> <p>Soil is an important carbon pool. The preservation of soil is crucial, because only healthy soils can store the carbon. The sequestration of carbon in soil organic matter is one of the main climate mitigation strategies for removing global-warming carbon dioxide (CO₂) from the atmosphere. Soil carbon sequestration is a process whereby CO₂ is removed from the atmosphere by vegetation, and stored in the soil's pool of organic carbon.</p>
