Vrbina, 8.4.2013

Subject: Invitation to a Meeting to clarify geological issues at the Krško site

Dear Mr. Stritar,

GEN energija has contracted a Consortium consisting of four institutions (BRGM (France), IRSN (France), ZAG (Slovenia) and GeoZS (Slovenia) to perform Geotechnical, Geological, and Seismological (GG&S) investigations and evaluations of the Krško site in 2007. The investigations that encompass a range of activities have not yet been completed. Nevertheless GEN has received an individual interim opinion in form of a letter from one Consortium partner - IRSN. In this letter, IRSN has outlined their positions on the Libna fault and its potential negative consequences on the licensing of the proposed sites.

Although results and conclusions of the report referenced in the IRSN letter are inconclusive, GEN found all interpretations important and immediately initiated several parallel activities to reduce uncertainties presented in the report. GEN also acted responsibly and submitted IRSN letter with our response letter and all references to Slovenian Nuclear Safety Authority (SNSA). SNSA made both letters with reference documents publicly available.

Slovenian Nuclear Safety Administration has requested GEN energija to organize a clarification meeting in order to exchange and explain differences in opinions related to geological issues at the Krško site.

Members of the Consortium are invited to attend the meeting to clarify and explain investigations performed, results obtained and relevant conclusions on geological issues related to geological characterization of the Krško site.

The meeting will be held on Friday, April 26, 2013 from 9:00 a.m. to 12:00 p.m. in Ljubljana, Slovenia. Information about exact meeting location will be sent later.

The proposed meeting agenda:

- 1.) Purpose of the geotechnical, geological and seismological investigations (GEN energija presentation)
- 2.) Status of the investigations in the frame of GG&S contractual obligations between GEN and the Consortium (BRGM presentation)
- 3.) Regional geological setting of the Krško Basin (GeoZS presentation)
- 4.) IRSN View and IRSN Letter (IRSN)
- 5.) Characterization of Libna structure (GEN / Rizzo)
- 6.) Probabilistic Fault Displacement Hazard Analysis (GEN / Rizzo)
